

1

---

---

---

---

---

---

---

---

Learning objectives

At the end of this session, it is expected that you will be able to:

- Understand the impact of IAD
- Recognise the symptoms of IAD
- Distinguish between IAD and pressure injuries
- Identify strategies to manage & prevent IAD
- Understand the implications of IAD & the new quality indicators

2

---

---

---

---

---

---

---

---

What is Incontinence-Associated Dermatitis (IAD)?

Urine +/- faeces = IAD

Other names

Nappy rash	Nappy dermatitis	Irritant dermatitis	Moisture lesions	Perineal dermatitis	Perineal rash
------------	------------------	---------------------	------------------	---------------------	---------------

3

---

---

---

---

---

---

---

---

### How common is IAD?

- Prevalence ranges from 20 - 40%
- Of 25% of patients with incontinence, 42% had IAD

IAD + unrelieved pressure results in a 5-fold increase in pressure injury risk

4

---

---

---

---

---

---

---

---

### Risks for IAD

- Type of incontinence
  - Faecal incontinence (diarrhoea/formed stool)
  - Double incontinence (faecal and urinary)
  - Urinary incontinence
- Frequency of incontinence
- Use of occlusive containment products
- Poor skin condition
- Compromised mobility
- Poor cognitive awareness
- Inability to perform self-care
- Pain
- Temperature
- Medications
- Poor nutritional status
- Critical illness

5

---

---

---

---

---

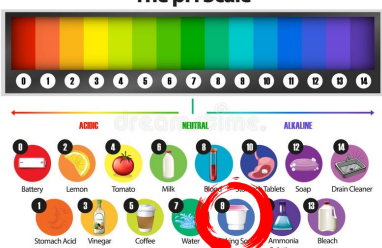

---

---

---

### How does incontinence cause IAD?

#### The pH Scale

ACIDIC: 1 Battery, 2 Lemon, 3 Tomato, 4 Stomach Acid, 5 Vinegar, 6 Coffee

NEUTRAL: 7 Water, 8 Soap, 9 Tablets, 10 Ammonia Solution

ALKALINE: 11 Drain Cleaner, 12 Bleach

6

---

---

---

---

---

---

---

---

7

---

---

---

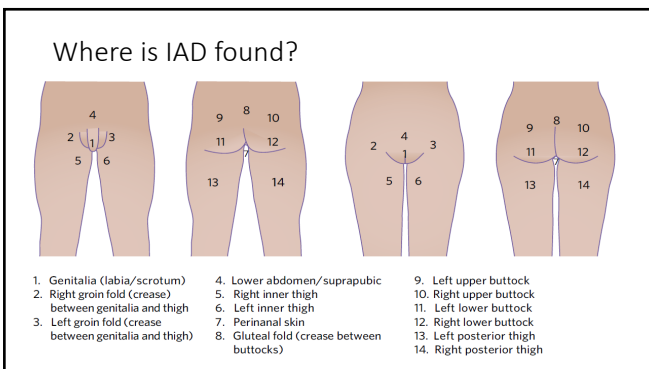

---

---

---

---

---

8

---

---

---

---

---

---

---

---

### How to identify IAD

Parameter	IAD	Pressure Injury
History	Urinary +/- faecal incontinence	Exposure to pressure/shear
Symptoms	Pain, burning, itching, tingling	Pain
Location	Perineum, perigenital area, buttocks, gluteal fold, medial & posterior aspect of upper thighs, lower back, may extend over bony prominence	Usually over a bony prominence or associated with medical device
Shape / edges	Diffuse, poorly defined edges, may be blotchy	Distinct edges or margins
Presentation / depth	Intact skin with erythema (blanchable or non-blanchable), with/without superficial, partial thickness skin loss	Varies from intact skin with non-blanchable erythema to full thickness skin loss. Base of wound may contain non-viable tissue
Other	Secondary superficial skin infection (e.g. candidiasis) may be present	Secondary soft tissue infection may be present

9

---

---

---

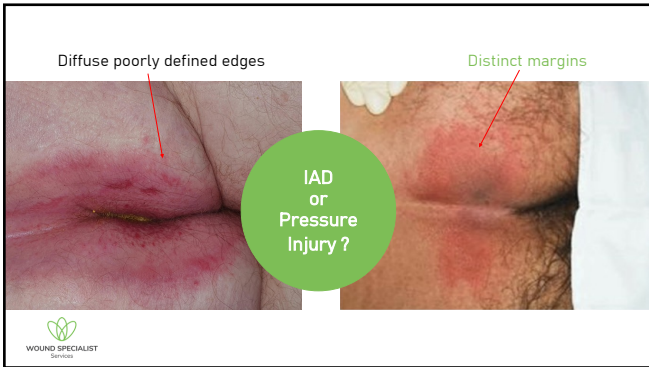

---

---

---

---

---

10

---

---

---

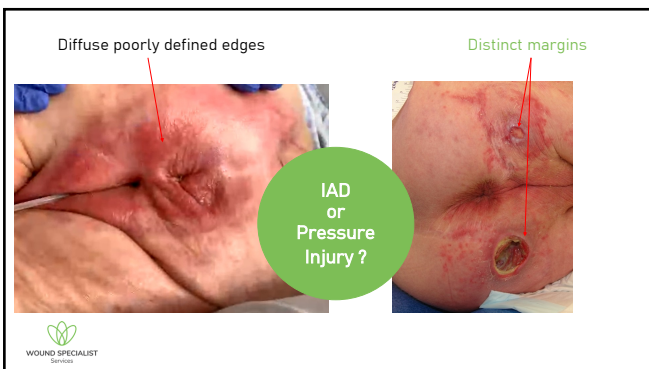

---

---

---

---

---

11

---

---

---

---

---

---

---

---

12

---

---

---

---

---

---

---

---

**CATEGORY 1: PERSISTENT REDNESS**

**Category 1A: Persistent redness without clinical signs of infection**

Critical criterion

**Persistent redness**  
A variety of tones of redness may be present. Patients with darker skin tones, the skin may be paler or darker than normal, or purple in colour.

Additional criteria

- Marked areas or discolouration from a previous (healed) skin defect
- Shiny appearance of the skin
- Macerated skin
- Intact vesicles and/or bullae
- Skin may feel tense or swollen at palpation
- Burning, tingling, itching or pain

(Beekman et al., 2015)

13

---

---

---

---

---

---

---

---

**Category 1B: Persistent redness with clinical signs of infection**

Critical criteria

**Persistent redness**  
A variety of tones of redness may be present. Patients with darker skin tones, the skin may be paler or darker than normal, or purple in colour.

**Signs of infection**  
Such as white scaling of the skin (suggesting a fungal infection) or satellite lesions (pustules surrounding the lesion, suggesting a Candida albicans fungal infection).

Additional criteria

- Marked areas or discolouration from a previous (healed) skin defect
- Shiny appearance of the skin
- Macerated skin
- Intact vesicles and/or bullae
- Skin may feel tense or swollen at palpation
- Burning, tingling, itching or pain

(Beekman et al., 2015)

14

---

---

---

---

---

---

---

---

**CATEGORY 2: SKIN LOSS**

**Category 2A: Skin loss without clinical signs of infection**

Critical criterion

**Skin loss**  
Skin loss may present as skin erosion (may result from damaged/eroded vesicles or bullae), denudation or excoriation. The skin damage pattern may be diffuse.

Additional criteria

- Persistent redness  
A variety of tones of redness may be present. Patients with darker skin tones, the skin may be paler or darker than normal, or purple in colour
- Marked areas or discolouration from a previous (healed) skin defect
- Shiny appearance of the skin
- Macerated skin
- Intact vesicles and/or bullae
- Skin may feel tense or swollen at palpation
- Burning, tingling, itching or pain

(Beekman et al., 2015)

15

---

---

---

---

---

---

---

---

**Category 2B: Skin loss with clinical signs of infection** (Beekman et al., 2015)

Critical criteria

**Skin loss**  
Skin loss may present as skin erosion (may result from damaged/eroded vesicles or bullae), denudation or excoriation. The skin damage pattern may be diffuse.

**Signs of infection**  
Such as white scaling of the skin (suggesting a fungal infection) or satellite lesions (pustules surrounding the lesion, suggesting a *Candida albicans* fungal infection), slough visible in the wound bed (yellow/brown/greyish), green appearance within the wound bed (suggesting a bacterial infection with *Pseudomonas aeruginosa*), excessive exudate levels, purulent exudate (pus) or a shiny appearance of the wound bed.

Additional criteria

- Persistent redness  
A variety of tones of redness may be present. Patients with darker skin tones, the skin may be paler or darker than normal, or purple in colour
- Marked areas or discolouration from a previous (healed) skin defect
- Shiny appearance of the skin
- Macerated skin
- Intact vesicles and/or bullae
- Skin may feel tense or swollen at palpation
- Burning, stinging, itching or pain

16

19

---

---

---

---

---

---

---

---

**What is a PI?**

- Localised injury to the skin and/or underlying soft tissue usually over a bony prominence or related to a medical or other device.
- Result of intense and/or prolonged pressure or pressure in combination with shear

WOUND SPECIALIST SERVICES

(NPUAP/EPUIP/PPPIA 2019)

20

---

---

---

---

---

---

---

---

**Pressure Injury Staging**

PI's are staged as:

- Stage I
- Stage II
- Stage III
- Stage IV

The higher the stage number the deeper the tissue involvement

- Unstageable
- Suspected Deep Tissue Injury

WOUND SPECIALIST SERVICES

21

---

---

---

---

---

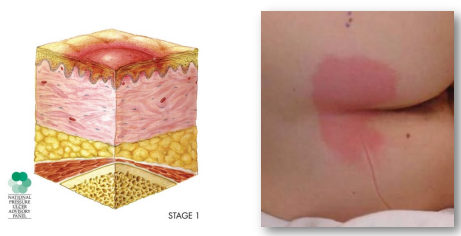

---

---

### Stage 1 Pressure Injury

The diagram shows a cross-section of the skin with redness and non-blanchable discoloration of the skin. The photograph shows a patient's buttock with a red, non-blanchable area.

STAGE 1

(NPUAP / EPUAP / PPPiA 2014)

22

---

---

---

---

---

---

---

---

### Stage 2 Pressure Injury

The diagram shows a cross-section of the skin with a partial-thickness loss of skin. The photograph shows a patient's buttock with a partial-thickness loss of skin.

STAGE 2

WOUND SPECIALIST Services

(NPUAP / EPUAP / PPPiA 2014)

23

---

---

---

---

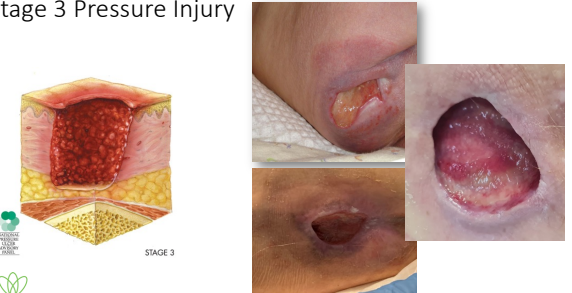

---

---

---

---

### Stage 3 Pressure Injury

The diagram shows a cross-section of the skin with a full-thickness loss of skin. The photographs show a patient's buttock with a full-thickness loss of skin.

STAGE 3

Management & prevention strategies

WOUND SPECIALIST  
Services

31

---

---

---

---

---

---

---

How do you manage episodes of incontinence?

32

---

---

---

---

---

---

---

Cleanse

- Close to skin pH & perfume-free skin cleansers
- Do not rub, pat dry
- Cleanse daily and after every episode of incontinence
- Avoid standard alkaline soaps
- Choose liquid skin cleansers or pre-moistened body tissues or foam cleansers
- Use soft, disposable non-woven cloth
- Gently dry skin if needed after cleansing

33

---

---

---

---

---

---

---

### Protect

- Apply a skin protectant
- Ensure skin protectant is compatible with other skin care products
- Apply to all areas in contact with urine and/or faeces
- Appropriate continence aid

34

---

---

---

---

---

---

---

---

### Restore

- Maintaining skin barrier function using a leave-on skin care product (moisturiser)

35

---

---

---

---

---

---

---

---

### Skin infection & IAD

- Obtain a bacterial wound swab
- Topical antifungal / corticosteroid and/or antibiotic ointment or cream used in conjunction with skin protectant

36

---

---

---

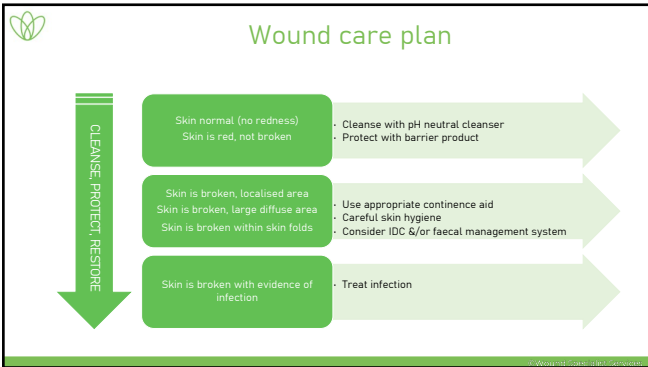

---

---

---

---

---

---

---

---

---

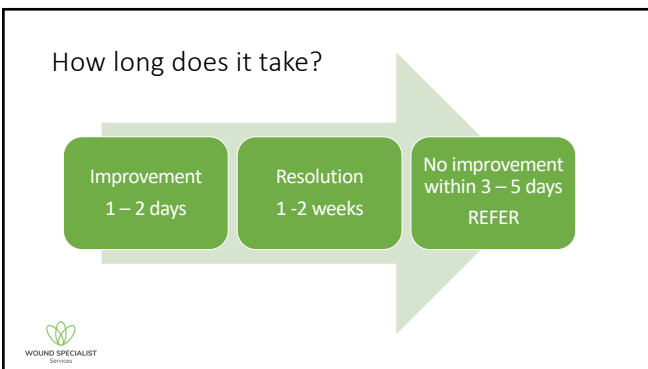

---

---

---

---

37

---

---

---

---

---

---

---

---

38

- What products to use for prevention & management of IAD?**
- Clinically proven to prevent and/or treat IAD
  - Close to skin pH
  - Low irritant potential / hypoallergenic
  - Does not sting on application
  - Transparent or can be easily removed for skin inspection
  - Removal/cleansing considers caregiver time & patient comfort
  - Does not increase skin damage
  - Does not interfere with function of continence aids
  - Compatible with other products
  - Acceptable to the consumer
  - Minimises number of products, resources & time
  - Cost-effective

---

39

**IAD OR PI ?**

**NEW QUALITY INDICATORS  
RESIDENTIAL AGED CARE**

**APRIL  
2023**

WOUND SPECIALIST Services

QI Program quality indicators		
<b>Unplanned weight loss</b> - Percentage of care recipients who experienced unplanned weight loss (5% or more) - Percentage of care recipients who experienced unplanned weight loss	<b>Falls and injury history</b> - Percentage of care recipients who experienced one or more falls resulting in injury - Percentage of care recipients who experienced one or more falls resulting in injury	<b>Physical restraint</b> - Percentage of care recipients who were physically restrained
<b>Medication management</b> - Percentage of care recipients who were prescribed one or more medications - Percentage of care recipients who received appropriate medication	<b>Incontinence care</b> - Percentage of care recipients who experienced incontinence - Percentage of care recipients who experienced incontinence	<b>Quality of life</b> - Percentage of care recipients who rated their quality of life
<b>Activities of daily living</b> - Percentage of care recipients who experienced a decline in ability of activities of daily living	<b>Continence engagement</b> - Percentage of care recipients who had goal or individual objectives of the service	
<b>Wardrobe</b> - Percentage of staff		

40

---

---

---

---

---

---

---

---

---

---

**What data you need to collect**

- Number of care recipients assessed for incontinence care (minus those excluded below)
- Number of care recipients excluded because they were absent from the service for the entire quarter
- Number of care recipients excluded from IAD assessment because they DID NOT have incontinence
- Number of care recipients with incontinence
- Number of care recipients with incontinence who experienced IAD
- Number of care recipients with incontinence who experienced IAD, reported against the 4 IAD sub-categories:
  - 1A: Persistent redness without clinical signs of infection
  - 1B: Persistent redness with clinical signs of infection
  - 2A: Skin loss without clinical signs of infection
  - 2B: Skin loss with clinical signs of infection

41

---

---

---

---

---

---

---

---

---

---

**When to start collecting data**

**COLLECT**

**1 April –  
30 June  
2023**

**REPORT**

**1 – 21  
July  
2023**

WOUND SPECIALIST Services

42

---

---

---

---

---

---

---

---

---

---

### Example: Typical Ville Aged Care Home

1. Urinary incontinence >1/day  
Persistent redness with no clinical signs of infection (Category 1A)

2. Urinary incontinence >1/day  
No signs of IAD

3. Faecal incontinence >1/week  
Skin loss with no clinical signs of infection (Category 2A)

WOUND SPECIALIST Services

---

---

---

---

---

---

---

---

43

### How to report

Care recipient A	Care recipient B	Care recipient C
Number of care recipients assessed for incontinence care = 3		
Number of care recipients who experienced incontinence = 3		
Number of care recipients excluded because they were absent = 0		
Number of care recipients excluded from IAD assessment because they did not have incontinence = 0		
Number of care recipients with incontinence who experienced IAD = 2		
Number of care recipients who experienced IAD, reported against the 4 sub-categories:		
Category 1A: Persistent redness without clinical signs of infection = 1		
Category 1B: Persistent redness with clinical signs of infection = 0		
Category 2A: Skin loss without clinical signs of infection = 1		
Category 2B: Skin loss with clinical signs of infection = 0		

WOUND SPECIALIST Services

(Department of Health & Aged Care, 2023)

---

---

---

---

---

---

---

---

44

### Get ready

1. Undertake a baseline continence assessment
2. Undertake ongoing screening for incontinence
3. Document findings in care record & undertake collaborative care planning
4. Implement appropriate strategies based on care recipient's needs & preferences
5. Recognise & manage adverse clinical events associated with incontinence

WOUND SPECIALIST Services

---

---

---

---

---

---

---

---

45

### Summary

- Preserving skin integrity is the best way to prevent PIs & IAD from occurring
- There is a difference between PIs & IAD
- If the consumer is NOT incontinent, it is not IAD
- IAD & PI can co-exist
- Both IAD & PI must be assessed & monitored
- If either condition fails to improve or deteriorates, refer for specialist advice

---

---

---

---

---

---

---

---
